

NANDANI TRIPATHI

[Phone](#) | [Email](#) | [LinkedIn](#) | [GitHub](#)

Professional Summary

Computer Science student with hands-on experience in data analytics, workflow automation, dashboards, and process optimization. Skilled in Python, SQL, Excel, Power BI, and automation tools, with experience in data structuring, reporting, and business insights. Interested in CRM implementation, RevOps, and business automation.

Education

VIT Bhopal University

Bachelor of Technology in Computer Science

Specialization in Cyber Security and Digital Forensics

2023 – 2027

CGPA: 8.79

Technical Skills

Data & Analytics: Python, SQL, Pandas, NumPy, Power BI, Microsoft Excel, Data Cleaning, Data Visualization, Exploratory Data Analysis (EDA)

Automation & Integration: Playwright, API Integration, Workflow Automation, LLM APIs

Business & Reporting: Data Structuring, Reporting, Dashboard Development, Business Insights

Programming Languages: Python, SQL, Java, HTML

AI/ML: Scikit-learn, Regression, Classification, Feature Engineering, LLMs, VLMs, Prompt Engineering

Frameworks & Tools: Flask, Streamlit, Git, GitHub, VS Code, Google Colab

Experience

EarthSense Labs Pvt. Ltd., IIT Delhi

LLM Intern

May 2026 – July 2026

Delhi, India

- Built browser automation workflows using Playwright to extract and structure procurement and tender data from government portals, reducing manual data collection.
- Developed AI-assisted data extraction pipelines to convert unstructured procurement documents into structured JSON datasets for analysis and reporting.
- Designed a Flask-based dashboard to track KPIs, bid evaluation status, relevance scores, and business insights for decision-making.
- Improved workflow reliability through debugging, testing, automation, and process optimization while collaborating using Git and GitHub.

Projects

AQEye – AQI Prediction Dashboard | *Python, Streamlit, Scikit-learn, Plotly* | [GitHub](#) | [Live Demo](#)

July 2026

- Built an ML-powered dashboard to predict AQI using Random Forest Regressor, achieving an R^2 score of approximately 0.91.
- Implemented single and bulk predictions, feature importance analysis, AQI visualizations, confidence intervals, and downloadable reports.
- Integrated OpenWeatherMap API for live pollution monitoring and deployed the application on Streamlit Cloud.

Datify - Retail Data Transformation & Insights | *Python, Pandas, MySQL, SQL* | [GitHub](#)

August 2026

- Built an end-to-end data workflow using Python and Pandas to clean, transform, and engineer features from 9,994 retail order records.
- Loaded the transformed dataset into MySQL and performed SQL-based analysis to evaluate revenue, profit, categories, regions, products, and customer segments.
- Created analytical metrics including revenue, profit, profit margin, and time-based features to support business performance analysis.

CricketIQ | *Python, Pandas, SQL, Scikit-learn, Streamlit* | [GitHub](#) | [Live Demo](#)

August 2026

- Built an end-to-end IPL analytics platform using ball-by-ball data to analyze team, player, matchup, and match-phase performance.
- Developed a Logistic Regression model to predict match outcomes using historical team win-rate features.
- Created an interactive Streamlit dashboard with performance insights, strategic analysis, and ML-based match prediction.

Leadership / Extracurricular

- Represented Unstop as a Campus Executive by promoting national-level competitions, organizing engagement initiatives, and increasing student participation in hackathons and skill-based events.
- Organized technical workshops, coding events, and hackathons as a Core Member of the Cyber Warrior Club, promoting cybersecurity, AI, and data science learning.
